EDUCATION

UNIVERSITY OF MARYLAND | M.ENG G CYBERSECURITY College Park, MD, USA | Aug 2023 - May 2025
Coursework: Cryptography, Pentesting, Software Security, PL Security, Cloud Security, ML Security

AMRITA VISHWA VIDYAPEETHAM | B.TECH COMPUTER SCIENCE Coimbatore, KA, IND | Jul 2015 - Jul 2019
Coursework: Operating Systems, OOP, Data Structures and Algorithms, Compilers, Computer Networks

EXPERIENCE

MICROSOFT | SECURITY RESEARCHER, MSRC V&M Remote - USA | Aug 2025 - Present

- Evaluated 230+ reported issues across Windows kernel, SMB, and Hyper-V components, performing root cause analysis and providing technical write-ups for engineering teams.
- Built and maintained automated reproduction pipelines for complex system-level bugs including memory corruption and authentication relay issues across Windows components.
- Developed agentic tooling and static analysis workflows to identify and classify related defect patterns across large codebases.
- Collaborated with Windows engineering groups on complex reproductions; validated proposed fixes prior to release and ensured correct patch propagation across affected components.

GOOGLE SUMMER OF CODE | CONTRIBUTOR Remote - USA | May 2024 - Aug 2024

- Improved ROP gadget discovery and classification by implementing constraint parsing techniques and wrote unit test cases for different architectures using Rizin APIs and MinUnit.
- Developed Rz-Solver, an ROP SMT solver plugin utilizing Rizin analysis plugins and Rizin IL APIs to strengthen binary analysis and constraint solving.

VMWARE TANZU (BROADCOM) | MEMBER OF TECHNICAL STAFF - 2 Bengaluru, IND | Sep 2021 - Jul 2023

- Developed an internal request and task engine with retry and async execution capabilities, resulting in a 50% reduction in Kubernetes objects' deployment time and enabling seamless rollbacks.
- Developed a SaaS offering for containerizing legacy applications to assist cloud migration; integrated SAST into GitLab CI pipelines.
- Developed a CLI client application to communicate with the Application Modernization tool.

VERSA NETWORKS | SECURITY SOFTWARE ENGINEER Bengaluru, IND | Jul 2019 - Aug 2021

- Developed secure and maintainable code for SASE products (Captive Portal, URL Filtering, User Identification) using DPDK APIs, deployed across multiple customer sites.
- Debugged memory and performance issues using Valgrind and Sanitizers (ASAN, TSAN) and implemented unit/regression tests.
- Built a secure API gateway with RBAC/ABAC and OAuth-based authorization using KoaJS for internal tools.

SKILLS

LANGUAGES:	C, C++, Java, Python, Bash, Golang, Javascript, Typescript, Assembly
TECHNOLOGIES:	Systems Programming, Vulnerability research, DevOps, Cloud Development, Agentic Security
FRAMEWORKS:	Protobuf, NodeJS, GDB, Kubernetes, Docker, GKE, EKS, Git, Cobra-CLI, NGINX RabbitMQ, Amazon RDS, Valgrind, ASAN, TSAN

NOTABLE CONTRIBUTIONS & OPEN SOURCE

- oxdeadfeed: Message passing client-server application in C/Protobuf demonstrating epoll i/o multiplexing and async tasks. [GitHub](#)
- Contributed patches to JEmalloc, Linux, and cve-bin-tool. Implemented per-thread Tcache parsing in GDB to debug heap in multithreaded binaries. [GitHub](#)
- Authored a **PagedOut** blog post on thread-level storage and tcache parsing in glibc.
- Honorable mentions in ICPC Regionals 2017, 2018 (ICPC - Amritapuri, Chennai)
